

Market Feasibility

Cavanaugh can help you establish realistic market boundaries and understand inputs and offtakes. What are the offtakes of your bioenergy system? What are the uses and values of the energy products created? Is the market for energy offtakes limited by utility regulations specific to your site? Are you selling the energy or displacing existing energy inputs? Most importantly, is the capacity and stability of the markets for all the offtakes, including capitalized environmental attributes, sufficient to ensure success for the term of your project. Cavanaugh can help you prepare a proper market feasibility analysis establishes a realistic boundary for the market and describes the markets that affect inputs and offtakes. Is there a market influence that will affect the value of feedstocks that are viable to your bioenergy system?
